

X-keys Integration

SKAARHOJ

Turn X-keys USB devices into networked Raw Panels you can configure with Reactor™

Benefits

- ★ Mix your X-keys products with SKAARHOJ controllers
- ★ Enjoy easy and powerful configuration with Reactor™
- ★ No external computer needed - connects to SKAARHOJ
- ★ Raw Panel enables X-keys over network with PoE
- ★ Add unique workflows with X-keys specialty devices

What to expect

With SKAARHOJ's X-keys application, connect multiple X-keys panels to a SKAARHOJ Blue Pill product for seamless integration with other SKAARHOJ devices. This allows for enhanced user-friendly interaction between SKAARHOJ panels and X-keys devices.

Once network-enabled, X-keys devices are converted to Raw Panel compliant devices, making them compatible with Reactor and other third-party applications that support Raw Panel.

Application examples

- **Shot Box:** Add an X-keys shot box to your SKAARHOJ controller. No extra computer required; configure with Reactor for advanced navigation.
- **Raw Panel:** Integrators can network multiple X-keys with the Blue Pill Server, adhering to the familiar Raw Panel protocol.
- **Local GPIO:** Use X-keys input/output boxes for local GPI on SKAARHOJ panels.
- **Foot Pedal:** Integrate foot switch triggers into your setup.

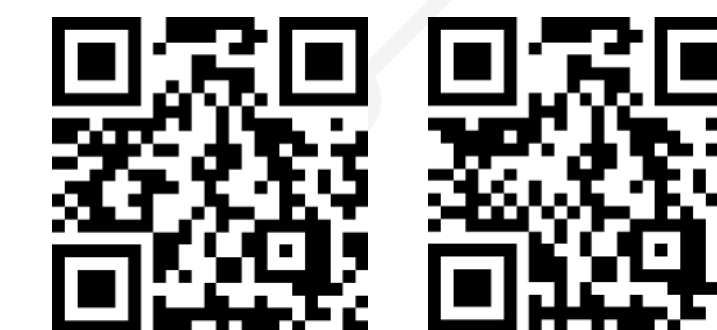

Licensing

The X-keys application offers a trial for evaluation. For continued use, purchase a license. Scan the QR codes for details.

Technical Note

XKey panels can connect to SKAARHOJ products via USB-A ports, available on larger "XC" controllers and the Blue Pill Server. An externally powered USB Hub might be needed, especially for connecting multiple X-keys. Ensure the "xpanel-xkeys" package from Blue Pill is installed. Once active, it detects connected X-keys, converting them to network-accessible Raw Panel devices for use by Reactor or other Raw Panel clients.
